

## Landonline Release 3.7 Enhancements

The following enhancements and defect fixes are currently being worked on for inclusion in Landonline Release 3.7

The inclusion of any of the items listed will be determined by the development and testing process. If a change proves to be more complex or problematic than originally envisaged, it may be withdrawn or postponed to a later release.

### Enhancements

Business Area	Ref.	Description
Bulk Data Extract	243667	<b>New Title to Parcel association table:</b> Increases the ability for Bulk Data Extract users to link titles to their most relevant parcels. Some of the data in this table will be from external data users not be official hence it does not form part of Landonline production data. (A separate parcel linking project is gradually improving the links between titles and parcels in Landonline production data) <i>Note: This will be released in BDE as soon as it is available, i.e. may be available prior to 3.7</i>
Workflow	245830	<b>Request Manual Copy going to the fullest In Tray:</b> This will improve the workflow of Request Manual Copy within LINZ
Infrastructure	245856	<b>RPL Batch failures - Post Registration Searches and New Titles:</b> This will fix a common cause of batch failure
Infrastructure	245859	<b>Complexity Changes to Jobs in the Intray require an expanded dropdown list:</b> LINZ process improvement
Survey	245834	<b>Automatically decommission mark:</b> Fixes several issues where marks are not correctly decommissioned
Titles	245840	<b>Business Rules re-running at Authorise:</b> An enhancement to improve the efficiency of titles processing/authorisation
Survey	245841	<b>Removal of distortion in CSD and Title plan images:</b> Survey capture linework is temporarily adjusted to allow it to be overlaid over existing survey linework in the spatial window. This temporarily adjusted linework is then passed to the plan generation module and sometimes results in visibly distorted diagrams. This enhancement passes correctly adjusted linework to the plan generation module.
Survey	245851	<b>Display Node id, Ref id and Mark Name:</b> Improves the efficiency of validating/approving CSDs by better identification of Marks reported in the C rules.
Survey & TA	251475	<b>Improve the process of attaching supporting documents:</b> Several improvements to the Record Supporting Documents screen and provision for multiple document attachment
Titles	240758	<b>Validation on entry of names:</b> Additional validations on corporate and individual name fields to reduce the incidence of common errors. This will improve data quality and as a consequence improve the accuracy of searches on name fields.

Titles	243666	<b>Provision for the association of unit development titles to spatially defined parcels:</b> Allows new unit development titles to be automatically associated to spatial parcels via their Supplementary Record Sheet (SRS) (back capture will be necessary for existing unit title developments). When the association exists the legal description(s) of the land subdivided will appear in the SRS header information and will also allow these SRS records to be added to the tree from the spatial window and/or from a legal description search.
Titles	245825	<b>Certify and Sign Requirements:</b> Provides read only access to the Certify and Sign screen to Primary Contacts without providing them signing access or compromising the security of the signing process. This will enable Primary Contacts to prepare e.g. any necessary supporting documentation for items that a Conveyancing Professional must certify for.
Titles	245827	<b>Caveat and Notice Claim instruments to provide for various methods of delivery for Address for Service:</b> Enables e-dealing users to enter electronic addresses in the Prepare Caveat and Prepare Notice of Claim screens e.g. email
Survey & Titles	245836	<b>Ability to print QC rework reasons from QC rework screen in Authorise:</b> Provides the ability to print, preview or copy the QC Rework Items from the 'Record QC details' screen – this includes QC for both Titles and Survey Transactions
Titles	245849	<b>Identification of all instruments and or memorials preventing registration where multiple titles are affected:</b> The T061 business rule will be changed to create a separate entry for every stop instrument it detects, and will include title references. This should remove the need for conveyancers to manually check for all affected titles.
Titles	245853	<b>PRS searches should not be able to be requested for New titles issuing from a title affected by a DVO:</b> Prevents new titles being retrieved by a Post Registration Search where their head title is subject to a Domestic Violence Order.
Titles	245854	<b>Registration Confirmation notices should not be created for 145 instruments:</b> Currently a registration confirmation notice is sent whenever a dealing and its instruments have been registered. The Registrar General of Land requires that when the dealing only contains Sec 145 instruments a different notice is required because these instruments are not registered.
Titles	245858	<b>Identification of Titles flagged as Maori Land, in the Searches screens:</b> Modifies search results to include an indication of whether searched titles may be Maori land.

## Defects

Business Area	Ref.	Description
Geodetic	242258	Geodetic mark names stripped of their mark state
Infrastructure	243887	9005 error in CMW_S04 Allocate Skills screen - click Add with no skill selected
Infrastructure	245319	CRI_S02c Complete Request Screen - fields editable even though greyed out
Infrastructure	245414	Maintain Fee Schedule screen - Msg 23086 displays multiple times
Infrastructure	245445	Punctuation not handled correctly in spatial search

Infrastructure	245862	Infrastructure - Message 122004 incorrectly displaying when internal & external checkboxes checked in CSA_S23 Maintain Request Type screen
Infrastructure	249352	Update Landonline Help Batch Type Descriptions
Survey	240666	LINZ staff to Transfer obs to PENDING nodes - this prevents surveys from re-submitting (internal)
Survey	241973	Geodetic - Codes Missing From Node View In CMN_S02_Maintain_Network
Survey	241975	Some adopted surveys are not brought in by LandXML import
Survey	242254	OPG - import incorrectly fails with "Captured parcels not present in import package".
Survey	245724	Plan Layout Error Messages Truncated.
Survey	245756	Message 9005 when closing out of Landonline when the spatial window is open
Survey	247441	Error 100691 encountered when trying to Delete an internally pre-allocated survey (internal)
Survey	248509	Parcel Intents with 'Covenant Area' should not have topology
Titles	T11981	A VM followed by an MP in the same dealing is failing T075 - VM treated as a discharge
Titles	243855	Expression is not valid error message displays when entering an apostrophe in Maintain Aliases/Other screen
Titles	243887	9005 error in CMW_S04 Allocate Skills screen - click Add with no skill selected
Titles	243978	Business Rule T083/Step Down Reason is not working when there is another Lodge instrument in the dealing
Titles	244271	Notices - check still being made on post code for countries other than New Zealand if notice linked to a dealing
Titles	244315	Certification order in DSTV is changing between Workspace and Desktop
Titles	244490	Registered Proprietor field in Prepare Transmission becomes blank when checking / unchecking DWTS
Titles	244624	Message 28342 has incorrect wording when it displays in the Prepare Transmission screen
Titles	245848	SQLDB Code:0 SQLSTATE=S1000 error for a Requisitioned dealing at Submit when the dealing when first submitted created annotations that are over 32000 characters
Titles	246659	TM instrument is missing structured data on submission to Desktop
Titles	246998	A145 DEALING 8793299 with title with just header details & 9005 error
Titles	247278	Transfer checkbox in Modify details screen is not saving changes
Titles	248268	Desktop Instrument Types need trailing blank spaces trimmed
Titles	249074	Message 28031 wording update

## Offline Plan Generation application software

(These may be released several months prior to 3.7 e.g. November/December 2011)

Business Area	Ref.	Description
Survey	245369	OPG - Review lineweights in OPG
Survey	245820	OPG - Unhandled exception when attempting to move a newly created diagram in Define Diagrams
Survey	T13086	OPG - MaxDatabase size is insufficient
Survey	T13088	OPG - SDF database grows too much after each update from package
